

MANAGEMENT SOFTWARE (MGR)

FLOW-DEVICE-MGR

APPLICATION

The new functionality integrated into Flow allows the STB-IP to be controlled in a centralized way.

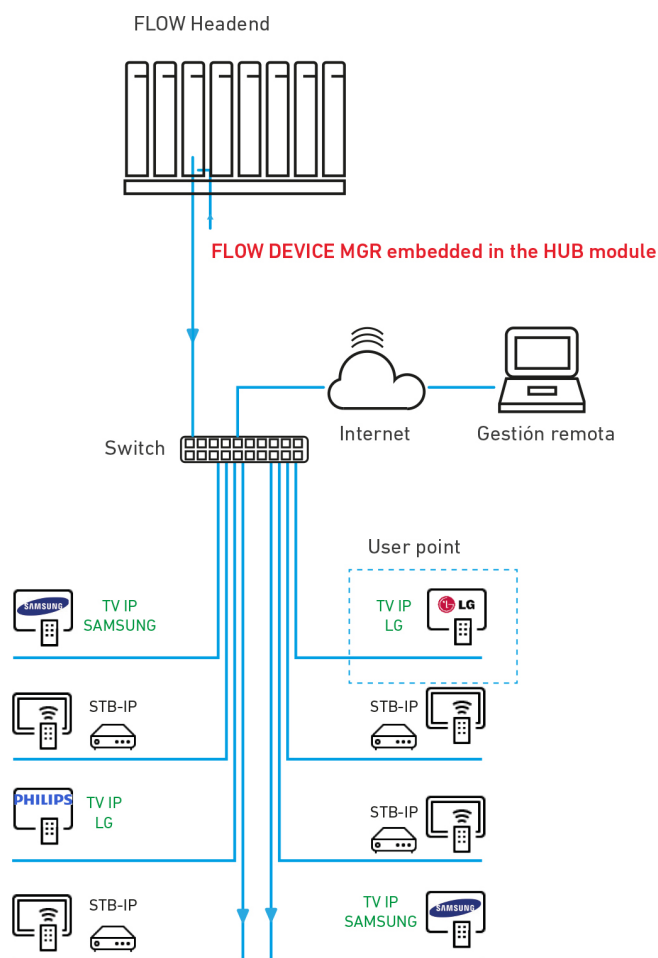

Main features

- Integrated into the control module (HUB) of FLOW.
- It is activated through a license that never expires and does not need renewal.
- FLOW DEVICE MGR generates a list of multicast channels for the STB-IP from FLOW.
- This list is generated automatically in case of any change in the headend.
- When STB-IP is connected, the headend assigns automatically an IP address (DHCP protocol).
- In the same IP assignment response, the URL to which it should connect is indicated in order to download the updated channel list.
- The default channel that should be shown on the STB at startup, can be centrally fixed.

Supported devices

- FLOW STB
- FLOW STB AC3+
- TV LG con API HCAP HTML5
- TV Samsung con API H.BROWSER*
- TV Philips con API JAPIT

* Remote switch off or switch on of Samsung TVs is not supported

MODEL	FLOW-DEVICE-MGR
Reference	4317
